

States

Remote Control Activation State

Cooking

Cleaning

Cooling

Key

BSH.Common.Status.RemoteControlActive

Description

This status indicates whether the allowance for remote controlling is enabled.

Data type

Boolean

Possible values

- true if remote control is activated
- false otherwise

Example

GET /api/homeappliances/{hald}/status/
BSH.Common.Status.RemoteControlActive

[➤ Expand source](#)

Remote Start Allowance State

Cooking

Cleaning

Cooling

Key

BSH.Common.Status.RemoteControlStartAllowed

Description

This status indicates whether the remote program start is enabled. This can happen due to a programmatic change (only disabling), or manually by the user changing the flag locally on the home appliance, or automatically after a certain duration - usually 24 hours.

Data type

Boolean

Possible values

- true if remote start is activated
- false otherwise

Example

GET /api/homeappliances/{hald}/status/
BSH.Common.Status.RemoteControlStartAllowed

[➤ Expand source](#)

Local Control State

Cooking

Cleaning

Cooling

Key

BSH.Common.Status.LocalControlActive

Description

This status indicates whether the home appliance is currently manually controlled by the user operating the home appliance, e.g. opening the door or pressing a button. After a few seconds without user intervention this flag is reverted and an appropriate event is sent.

Data type

Boolean

Possible values

- true if the home appliance is currently operated locally
- false otherwise

Example

[GET /api/homeappliances/{hald}/status/BSH.Common.Status.LocalControlActive](#)

[➤ Expand source](#)

Operation State

Cooking

Cleaning

Cooling

Key

BSH.Common.Status.OperationState

Description

This status describes the operation state of the home appliance.

Data type

Enumeration

Possible values

- Inactive
Key: *BSH.Common.EnumType.OperationState.Inactive*
Description: Home appliance is inactive. It could be switched off or in standby.
- Ready
Key: *BSH.Common.EnumType.OperationState.Ready*
Description: Home appliance is switched on. No program is active.
- Delayed Start
Key: *BSH.Common.EnumType.OperationState.DelayedStart*
Description: A program has been activated but has not started yet.
- Run
Key: *BSH.Common.EnumType.OperationState.Run*
Description: A program is currently active.

–

Description: The active program requires a user interaction.

- Finished

Key: *BSH.Common.EnumType.OperationState.Finished*

Description: The active program has finished or has been aborted successfully.

- Error

Key: *BSH.Common.EnumType.OperationState.Error*

Description: The home appliance is in an error state.

- Aborting

Key: *BSH.Common.EnumType.OperationState.Aborting*

Description: The active program is currently aborting.

Example

Door State

Cooking

Cleaning

Cooling

Key

BSH.Common.Status.DoorState

Description

This status describes the state of the door of the home appliance. A change of that status is either triggered by the user operating the home appliance locally (i.e. opening/closing door) or automatically by the home appliance (i.e. locking the door).

Data type

Enumeration

Possible values

- Door open
Key: *BSH.Common.EnumType.DoorState.Open*
Description: The door of the home appliance is open.
- Door closed

Description: The door of the home appliance is locked.

Availability
